ONLINE ACTIVITY #2
Personalized Linux, and Git Cheat Sheet

Using any available resources (official Git documentation, online tutorials, or the built-in git --help command), research the following topics and create a personalized 1-page (A4) cheat sheet:

1. Basic Linux commands (command, sample usage) (at least 10)
2. Basic Git commands (command, sample usage, description (use your own wordings), common options/flags

git init	git restore
git status	git branch
git add	git checkout / git switch
git commit	git merge
git log	git tag
git diff	git clone

3. the three-tree architecture of Git

You are free to use any design or color scheme, just make sure it is readable.

Submission:

1. Use PDF as the file format for your cheat sheet.
2. Upload it to your GitHub repository
3. Submit the link here:
<https://drive.google.com/drive/folders/1-Y6e6E6PoLyGgB0WZ8prRCNfolpV3cj0?usp=sharing>

Reminders:

Please put a "Reference" section in the cheat sheet for the materials you cited.

I **DO NOT PROHIBIT** the use of AI for this activity, but please declare the extent of the use.

Sample:

"The author used [Tool Name, Version] to [specific task] during assignment preparation. The author reviewed and edited the content as needed and takes full responsibility for the final content of the work."

Or

"I have not used any AI or AI-assisted technologies to prepare this work."

Basic Linux commands

Command	Sample usage	Description
ls	ls -la	Lists files and directories in the current directory.
pwd	pwd	Shows the full path of the current directory.
mkdir	mkdir project	Creates a new directory.
cd	cd project	Changes to another directory.
rmdir	rmdir TestFolder	Deletes an empty directory.
cat	cat README.md	Displays the contents of a file.
cp	cp file1.txt file2.txt	Copies a file or directory.
mv	mv old.txt new.txt	Moves or renames a file or directory.
rm	rm test.txt	Deletes a file.
touch	touch index.html	Creates an empty file or updates its timestamp.
clear	clear	Clears the terminal screen.
grep	grep "Python" notes.txt	Searches for matching text in a file.
echo	echo "Hello Linux"	Displays text in the terminal.
man	man ls	Displays the manual/help information for a command.

Basic Git commands

Command	Sample usage	Description	Common Options/Flags
git init	git init	Initializes Git in the current project folder.	
git status	git status	Shows the current status of the files and the changes made in the project.	

git add	git add .	Adds the changes to the staging area before creating a commit.	. all changes
git commit	git commit -m "Update"	Saves the staged changes and records them in the Git history.	-m commit message
git log	git log --oneline	Displays the previous commits made in the repository.	--oneline short history
git diff	git diff	Shows the differences or changes between files or versions.	--staged show staged changes
git restore	git restore file.py	Restores the changes made to a file and brings it back to its previous state.	--staged unstage changes
git branch	git branch feature	Creates a new branch or shows the branches available in the repository.	-d delete branch
git checkout / git switch	git switch main	Switches from the current branch to another branch.	-c create branch
git merge	git merge feature	Combines the changes from another branch into the current branch.	
git tag	git tag v1.0	Gives a name or label to a specific commit	
git clone	git clone <url>	Creates a copy of an existing repository on the computer.	

Three-Tree Architecture of Git

Tree	Description
Working Directory	The files you are currently editing.
Index / Staging Area	The changes prepared for the next commit.
HEAD	The last committed snapshot.
